Memory Key
1. Reset

Connect the power, and press the down button for 5 seconds, the above code flickers. Press and hold the down button again, the lifting frame will lift up and the screen shows height, reset completes.

Do RESET for below occasions,

- **When trolley set up and connect power for first time.**

- If left and right lifting frames are lifted at a different height caused by external force, the motor will stop working. Please make trolley unloaded and do the reset.

- Error code E01 means motor self-protect caused by overheat **(work continuously for 4 minutes)** or overload **(load over 100kgs)** , just no further operation for 16 minutes and do reset.

- Error code E07 means cable loose, please open motor case and check connection of cable **M1** & **M2** , and do the reset.

2. Height setting & position short key

Setting the height as requested, press button M and then press button 1, short key is settled. When press the button 1 in the further use, the height will be automatically settled at Height 1. Repeat the settings will remove the height setting. User can set two heights with button 1 and 2.

**Notes: Short key is only for lifting up and down.**
